Products of the Year

Reference Imaging CinePro 9x Elite video projector
Teranex HDX Cinema MX video processor

What more can we say that we haven't already said about these products? This package produces more

of a "Wow!" factor than any other video display we know of. It costs an arm and a leg, but if you can afford it, it's worth it. If you keep the screen

width reasonable—we recommend no more than 8 feet; 7 feet is better—you might never want to go to a movie theater again.
